

Introduction

The products on this Registered Product list for Solar Collectors have been tested in accordance with IS EN 12975 (*EN 12975-(1,2):2006 Thermal solar systems and components - Solar collectors - Part 1: General Requirements, Part 2: Test methods*) and are assumed to be proper materials for the purpose of Part L of the Building Regulations.

However, it should be noted that the dwelling as a whole, incorporating these products, must comply with all Parts of the Building Regulations. Issues of particular relevance where, for example, roof mounted solar panels are fitted may include: weather tightness, fire safety, structural safety etc.

When choosing and installing these products in a particular dwelling, necessary maintenance and access for repair or replacement should be fully considered.

Draft Irish guidelines (**SR 50-2:2010 Code of practice for building services - Part 2: Solar panels**) have been developed to elaborate on the design, installation and commissioning issues relating to solar heating systems. These guidelines are intended to assist providers and specifiers of solar water heating systems, in the interpretation of the requirements (not directly addressed by Part L of the Building Regulations) and to provide guidance as to how the requirements should be addressed. The draft guidelines are currently available for public consultation and can be downloaded from: [NSAI consultation](#).

The emphasis, in the guidelines, is placed on general principles and not on detailed aspects of particular systems. Third party certification bodies e.g. NSAI/IAB are available to assess compliance of particular systems with all parts of the Building Regulations.

The guidelines have been developed by NSAI Agrément, Department of Environment, Heritage and Local Government (DoEHLG) and Sustainable Energy Authority of Ireland (SEAI)

Qualified installers may include SEAI registered installers, FAS trained plumbers who have completed the renewable technologies module or similar.
