

Renewable Energy

recording sheet - photocopy and use

Investigation 3 Template Windmill

You will need - Scissors, Pencil and a thumb tack

What to do

- Cut out the square
- Cut along each line as far as the mark on the line.
- Bring each lettered corner to the center.
- Be careful not to press the page flat as you need a loop in the paper to allow the wind to go through.
- Put a thumb tack through the middle catching each of the 4 corners.
- Attach the thumbtack and paper to a pencil.
- Why not take them outside and see how they work in the wind.
