Understanding the labelling on Showers

All energy labels carry the following information:
- Brand name
- Supplier’s model number
- Energy efficiency class.

Some, but not all labels, include energy consumption information. It indicates how many kilowatt hours (units of electricity) will be used per year, per hour or per cycle under specified operating conditions. To estimate costs, simply multiply the kWh number by the cost of a unit of electricity (currently around 16c).

The indoor sound power level in dB.

The annual electricity consumption in kWh in terms of final energy and/or the annual fuel consumption in GJ.

The water heating function, including the declared load profile (from XS up to XXL).
