All energy labels carry the following information:

- Brand name
- Supplier’s model number
- Energy efficiency class.

Some, but not all labels, include energy consumption information. It indicates how many kilowatt hours (units of electricity) will be used per year, per hour or per cycle under specified operating conditions. To estimate costs, simply multiply the kWh number by the cost of a unit of electricity (currently around 16c).

Understanding the labelling on Domestic ovens

Usable volume of the cavity in litres.

Energy consumption per cycle in kWh for conventional heating function and (if available) the fan, based on a standard load.

Indicates gas oven.
