## All energy labels carry the following information:

▶ Brand name

▶ Supplier's model number

▶ Energy efficiency class.

All labels include energy consumption information. It indicates how many kilowatt hours (units of electricity) will be used per year, per hour or per cycle under specified operating conditions. To estimate costs, simply multiply the kWh number by the cost of a unit of electricity (currently around 40c).

Brand name or trade mark

Supplier's model identifier

Energy efficiency class

Annual energy consumption in kWh per year. To calculate the kWh running cost, take the total kWh value and multiply by the cost of a unit of electricity

Understanding the labelling on

Stoves

Display on the front of the unit in a visible manner.

Note: EU energy labelling of local space heaters became effective from January 2018. Products supplied to you by manufacturers pre-2018 DO NOT require energy labels.

Retailers can sell such products 'unlabelled'. If uncertain, always check the date the product was supplied to you by the manufacturer.
